DIGITAL LABEL FINISHING

*Fastrack is perfect
for any digital label
printer*

The Fastrack Mini is the compact solution for cutting labels and it is the simplified version from our big finishers from the Fastrack series.

The Intermittent finishing system is stable for small, medium and big runs, and it is the ideal solution for finishing self-adhesive labels, printed with digital systems as such as: Thermo-transfer (ribbon), Ink-jet UV, Inkjet waterbased, Laser, Wax, Flexographic, OffSet and rotographic.

Excellent quality and resistance, thanks to the laminating process and simplified blade mount due the magnetic cylinder included.

High technology, friendly interface, robust set for high production. Contact our team to book a trial in our factory.
